Current tariff classification

Schedule 3 - Section XVI

PublishingPageContent4

Section XVI - Machinery and mechanical appliances; electrical equipment; parts thereof; sound recorders and reproducers, television image and sound recorders and reproducers, and parts and accessories of such articles

Chapter 85 - Electrical machinery and equipment and parts thereof; sound recorders and reproducers, television image and sound recorders and reproducers, and parts and accessories of such articles

Notes

PublishingPageContent2

Notes.

This Chapter does not cover:

Electrically warmed blankets, bed pads, foot-muffs or the like; electrically warmed clothing, footwear or ear pads or other electrically warmed articles worn on or about the person;

Articles of glass of 7011;

Machines and apparatus of 8486;

Vacuum apparatus of a kind used in medical, surgical, dental or veterinary sciences (Chapter 90); or

Electrically heated furniture of Chapter 94 .

8501 to 8504 do not apply to goods described in 8511, 8512, 8540, 8541 or 8542.

However, metal tank mercury arc rectifiers remain classified in 8504.

For the purposes of 8507, “electric accumulators” includes those presented with ancillary components which contribute to the accumulator’s function of storing and supplying energy or protect it from damage, such as electrical connectors, temperature control devices (for example, thermistors) and circuit protection devices. They may also include a portion of the protective housing of the goods in which they are to be used.

8509 covers only the following electro-mechanical machines of the kind commonly used for domestic purposes:

Floor polishers, food grinders and mixers, and fruit or vegetable juice extractors, of any weight;

Other machines provided the weight of such machines does not exceed 20 kg.

The heading does not, however, apply to fans or ventilating or recycling hoods incorporating a fan, whether or not fitted with filters (8414), centrifugal clothes-dryers (8421), dish washing machines (8422), household washing machines (8450), roller or other ironing machines (8420 or 8451), sewing machines (8452), electric scissors (8467) or to electro-thermic appliances (8516).

For the purposes of 8517, “smartphones” means telephones for cellular networks, equipped with a mobile operating system designed to perform the functions of an automatic data processing machine such as downloading and running multiple applications simultaneously, including third-party applications, and whether

or not integrating other features such as digital cameras and navigational aid systems.

For the purposes of 8523:

“Solid-state non-volatile storage devices” (for example, “flash memory cards” or “flash electronic storage cards”) are storage devices with a connecting socket, comprising in the same housing one or more flash memories (for example, “FLASH E2PROM”) in the form of integrated circuits mounted on a printed circuit board. They may include a controller in the form of an integrated circuit and discrete passive components, such as capacitors and resistors;

“Smart cards” means cards which have embedded in them one or more electronic integrated circuits (a microprocessor, random access memory (RAM) or read-only memory (ROM)) in the form of chips. These cards may contain contacts, a magnetic stripe or an embedded antenna but do not contain any other active or passive circuit elements.

For the purposes of 8524, “flat panel display modules” refer to devices or apparatus for the display of information, equipped at a minimum with a display screen, which are designed to be incorporated into articles of other headings prior to use. Display screens for flat panel display modules include, but are not limited to, those which are flat, curved, flexible, foldable or stretchable in form. Flat panel display modules may incorporate additional elements, including those necessary for receiving video signals and the allocation of those signals to pixels on the display. However, 8524 does not include display modules which are equipped with components for converting video signals (e.g. a scaler IC, decoder IC or application processer) or have otherwise assumed the character of goods of other headings.

For the classification of flat panel display modules defined in this Note, 8524 shall take precedence over any other heading in this Schedule.

For the purposes of 8534.00.00, "printed circuits" are circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semiconductor elements).

"Printed circuits" does not cover circuits combined with elements other than those obtained during the printing process, nor does it cover individual, discrete resistors, capacitors or inductances. Printed circuits may, however, be fitted with non-printed connecting elements.

Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in 8542.

For the purposes of 8536, “connectors for optical fibres, optical fibre bundles or cables” means connectors that simply mechanically align optical fibres end to end in a digital line system. They perform no other function, such as the amplification, regeneration or modification of a signal.

8537 does not include cordless infrared devices for the remote control of television receivers or other electrical equipment (8543).

For the purposes of 8539, “light-emitting diode (LED) light sources” covers:

“Light-emitting diode (LED) modules” which are electrical light sources based on light-emitting diodes (LED) arranged in electrical circuits and containing further elements like electrical, mechanical, thermal or optical elements. They also contain discrete active elements, discrete passive elements, or articles of 8536 or 8542 for the purposes of providing power supply or power control. Light-emitting diode (LED) modules do not have a cap designed to allow easy installation or replacement in a luminaire and ensure mechanical and electrical contact.

“Light-emitting diode (LED) lamps” which are electrical light sources containing one or more LED modules containing further elements like electrical, mechanical, thermal or optical elements. The distinction between light-emitting diode (LED) modules and light-emitting diode (LED) lamps is that lamps have a cap designed to allow easy installation or replacement in a luminaire and ensure mechanical and electrical contact.

For the purposes of 8541 and 8542:

“Semiconductor devices” are semiconductor devices the operation of which depends on variations in resistivity on the application of an electric field or semiconductor-based transducers.

Semiconductor devices may also include assembly of plural elements, whether or not equipped with active and passive device ancillary functions.

“Semiconductor-based transducers” are, for the purposes of this definition, semiconductor-based sensors, semiconductor-based actuators, semiconductor-based resonators and semiconductor-based oscillators, which are types of discrete semiconductor-based devices, which perform an intrinsic function, which are able to convert any kind of physical or chemical phenomena or an action into an electrical signal or an electrical signal into any type of physical phenomenon or an action.

All the elements in semiconductor-based transducers are indivisibly combined, and may also include necessary materials indivisibly attached, that enable their construction or function.

The following expressions mean:

“Semiconductor-based” means built or manufactured on a semiconductor substrate or made of semiconductor materials, manufactured by semiconductor technology, in which the semiconductor substrate or material plays a critical and unreplaceable role of transducer function and performance, and the operation of which is based on semiconductor properties including physical, electrical, chemical and optical properties.

“Physical or chemical phenomena” relate to phenomena, such as pressure, acoustic waves, acceleration, vibration, movement, orientation, strain, magnetic field strength, electric field strength, light, radioactivity, humidity, flow, chemicals concentration, etc.

“Semiconductor-based sensor” is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of detecting physical or chemical quantities and converting these into electric signals caused by resulting variations in electric properties or displacement of a mechanical structure.

“Semiconductor-based actuator” is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of converting electric signals into physical movement.

“Semiconductor-based resonator” is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures in response to an external input.

“Semiconductor-based oscillator” is a type of semiconductor device, which consists of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures.

“Light-emitting diodes (LED)” are semiconductor devices based on semiconductor materials which convert electrical energy into visible, infra-red or ultra-violet rays, whether or not electrically connected among each other and whether or not combined with protective diodes. Light-emitting diodes (LED) of 8541 do not incorporate elements for the purposes of providing power supply or power control;

“Electronic integrated circuits” are:

Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, inductances, etc.) are created in the mass (essentially) and on the surface of a semiconductor or compound semiconductor material (for example, doped silicon, gallium arsenide, silicon germanium, indium phosphide) and are inseparably associated;

Hybrid integrated circuits in which passive elements (resistors, capacitors, inductances, etc.), obtained by thin- or thick-film technology, and active elements (diodes, transistors, monolithic integrated circuits, etc.), obtained by semiconductor technology, are combined to all intents and purposes indivisibly, by interconnections or interconnecting cables, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include discrete components;

Multichip integrated circuits consisting of two or more interconnected monolithic integrated circuits combined to all intents and purposes indivisibly, whether or not on one or more insulating substrates, with or without leadframes, but with no other active or passive circuit elements;

Multi-component integrated circuits (MCOs): a combination of one or more monolithic, hybrid, or multi-chip integrated circuits with at least one of the following components: silicon-based sensors, actuators, oscillators, resonators or combinations thereof, or components performing the functions of articles classifiable under 8532, 8533, 8541, or inductors classifiable under 8504, formed to all intents and purposes indivisibly into a single body like an integrated circuit, as a component of a kind used for assembly onto a printed circuit board (PCB) or other carrier, through the connecting of pins, leads, balls, lands, bumps, or pads.

For the purposes of this definition:

“Components” may be discrete, manufactured independently then assembled onto the rest of the MCO, or integrated into other components.

“Silicon based” means built on a silicon substrate, or made of silicon materials, or manufactured onto integrated circuit die.

“Silicon-based sensors” consist of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of detecting physical or chemical phenomena and transducing these into electric signals, caused by resulting variations in electric properties or displacement of a mechanical structure. “Physical or chemical phenomena” relates to phenomena, such as pressure, acoustic waves, acceleration, vibration, movement, orientation, strain, magnetic field strength, electric field strength, light, radioactivity, humidity, flow, chemicals concentration, etc.

“Silicon based actuators” consist of microelectronic and mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of converting electrical signals into physical movement.

“Silicon based resonators” are components that consist of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures in response to an external input.

“Silicon based oscillators” are active components that consist of microelectronic or mechanical structures that are created in the mass or on the surface of a semiconductor and that have the function of generating a mechanical or electrical oscillation of a predefined frequency that depends on the physical geometry of these structures.

For the classification of the articles defined in this Note, 8541 and 8542 shall take precedence over any other heading in this Schedule, except in the case of 8523, which might cover them by reference to, in particular, their function.

Notes 5, 7, 11, 12(a)(i) and (ii), and 12(3)(a) operative 1/1/22. Note 10 repealed operative 1/1/22. Notes 5, 8 to 10 and 9 renumbered.

Subheading Notes

8525.81.00 covers only high-speed television cameras, digital cameras and video camera recorders having one or more of the following characteristics:

writing speed exceeding 0.5 mm per microsecond;

time resolution 50 nanoseconds or less;

frame rate exceeding 225,000 frames per second.

In respect of 8525.82.00, radiation-hardened or radiation-tolerant television cameras, digital cameras and video camera recorders are designed or shielded to enable operation in a high-radiation environment. These cameras are designed to withstand a total radiation dose of at least 50 × 103 Gy(silicon) (5 × 106 RAD (silicon)), without operational degradation.

8525.83.00 covers night vision television cameras, digital cameras and video camera recorders which use a photocathode to convert available light to electrons, which can be amplified and converted to yield a visible image. This subheading excludes thermal imaging cameras (generally 8525.89.00).

8527.12.00 covers only cassette-players with built-in amplifier, without built-in loudspeaker, capable of operating without an external source of electric power and the dimensions of which do not exceed 170 mm x

100 mm x 45 mm.

For the purposes of 8549.1, “spent primary cells, spent primary batteries and spent electric accumulators” are those which are neither usable as such because of breakage, cutting-up, wear or other reasons, nor capable of being recharged.

Subheading Notes 1 to 3 and 5 operative 1/1/22. Subheading Note 1 renumbered as Subheading Note 4.

Additional Notes

In this Chapter "kVA" means kilovoltampere.

For the purposes of 8539:

"lamps" means light globes, bulbs, tubes, and the like which consist of glass, quartz or similar containers, of various shapes, having the necessary elements for converting electrical energy into light rays, including infra-red or ultra-violet rays;

"lamps" also includes sealed beam lamp units and arc-lamps;

"lamps" equipped with external features such as lamp holders, switches, flex and plugs, transformers, etc. are excluded from this heading.

Additional Note 3 repealed operative 1/1/22.

Page Content

8501 Electric motors and generators (excluding generating sets) 8502 Electric generating sets and rotary converters8503 Parts suitable for use solely or principally with the machines of 8501 or 85028504 Electrical transformers, static converters (for example, rectifiers) and inductors8505 Electro-magnets; permanent magnets and articles intended to become permanent magnets after magnetisation; electro-magnetic or permanent magnet chucks, clamps and similar holding devices; electro-magnetic couplings, clutches and brakes; electro-magnetic lifting heads8506 Primary cells and primary batteries8507 Electric accumulators, including separators therefor, whether or not rectangular (including square) 8508 Vacuum cleaners8509 Electro-mechanical domestic appliances, with self-contained electric motor, other than vacuum cleaners of 85088510 Shavers, hair clippers and hair-removing appliances, with self-contained electric motor8511 Electrical ignition or starting equipment of a kind used for spark-ignition or compression-ignition internal combustion engines (for example, ignition magnetos, magneto-dynamos, ignition coils, sparking plugs and glow plugs, starter motors); generators (for example, dynamos, alternators) and cut-outs of a kind used in conjunction with such engines8512 Electrical lighting or signalling equipment (excluding articles of 8539), windscreen wipers, defrosters and demisters, of a kind used for cycles or motor vehicles8513 Portable electric lamps designed to function by their own source of energy (for example, dry batteries, accumulators, magnetos), other than lighting equipment of 85128514 Industrial or laboratory electric furnaces and ovens (including those functioning by induction or dielectric loss); other industrial or laboratory equipment for the heat treatment of materials by induction or dielectric loss8515 Electric (including electrically heated gas), laser or other light or photon beam, ultrasonic, electron beam, magnetic pulse or plasma arc soldering, brazing or welding machines and apparatus, whether or not capable of cutting; electric machines and apparatus for hot spraying of metals or cermets8516 Electric instantaneous or storage water heaters and immersion heaters; electric space heating apparatus and soil heating apparatus; electro-thermic hair-dressing apparatus (for example, hair dryers, hair curlers, curling tong heaters) and hand dryers; electric smoothing irons; other electro-thermic appliances of a kind used for domestic purposes; electric heating resistors, other than those of 8545 8517 Telephone sets, including smartphones and other telephones for cellular networks or for other wireless networks; other apparatus for the transmission or reception of voice, images or other data, including apparatus for communication in a wired or wireless network (such as a local or wide area network), other than transmission or reception apparatus of 8443, 8525, 8527 or 85288518 Microphones and stands therefor; loudspeakers, whether or not mounted in their enclosures; headphones and earphones, whether or

not combined with a microphone, and sets consisting of a microphone and one or more loudspeakers; audio-frequency electric amplifiers; electric sound amplifier sets8519 Sound recording or reproducing apparatus8520 No heading8521 Video recording or reproducing apparatus, whether or not incorporating a video tuner8522 Parts and accessories suitable for use solely or principally with the apparatus of 8519 to 85218523 Discs, tapes, solid-state non-volatile storage devices, “smart cards” and other media for the recording of sound

or of other phenomena, whether or not recorded, including matrices and masters for the production of discs, butexcluding products of Chapter 378524 Flat panel display modules, whether or not incorporating touch-sensitivescreens8525 Transmission apparatus for radio-broadcasting or television, whether or not incorporating receptionapparatus or sound recording or reproducing apparatus; television cameras, digital cameras and video camerarecorders8526 Radar apparatus, radio navigational aid apparatus and radio remote control apparatus8527Reception apparatus for radio-broadcasting, whether or not combined, in the same housing, with soundrecording or reproducing apparatus or a clock8528 Monitors and projectors, not incorporating televisionreception apparatus; reception apparatus for television, whether or not incorporating radio-broadcast receiversor sound or video recording or reproducing apparatus8529 Parts suitable for use solely or principally with theapparatus of 8524 to 85288530 Electrical signalling, safety or traffic control equipment for railways, tramways,roads, inland waterways, parking facilities, port installations or airfields (other than those of 8608.00.00)8531Electric sound or visual signalling apparatus (for example, bells, sirens, indicator panels, burglar or fire alarms),other than those of 8512 or 85308532 Electrical capacitors, fixed, variable or adjustable (pre-set)8533 Electricalresistors (including rheostats and potentiometers), other than heating resistors8534 Printed circuits8535Electrical apparatus for switching or protecting electrical circuits, or for making connections to or in electricalcircuits (for example, switches, fuses, lightning arresters, voltage limiters, surge suppressors, plugs, and otherconnectors, junction boxes), for a voltage exceeding 1 000 volts8536 Electrical apparatus for switching orprotecting electrical circuits, or for making connections to or in electrical circuits (for example, switches, relays,fuses, surge suppressors, plugs, sockets, lamp-holders and other connectors, junction boxes), for a voltage notexceeding 1 000 volts; connectors for optical fibres, optical fibre bundles or cables8537 Boards, panels,consoles, desks, cabinets and other bases, equipped with two or more apparatus of 8535 or 8536, for electriccontrol or the distribution of electricity, including those incorporating instruments or apparatus of Chapter 90,and numerical control apparatus, other than switching apparatus of 85178538 Parts suitable

for use solely or principally with the apparatus of 8535, 8536 or 8537 8539 Electric filament or discharge lamps, including sealed beam lamp units and ultra-violet or infra-red lamps; arc-lamps; light-emitting diode (LED) light sources8540 Thermionic, cold cathode or photo-cathode valves and tubes (for example, vacuum or vapour or gas-filled valves and tubes, mercury arc rectifying valves and tubes, cathode-ray tubes, television camera tubes)8541 Semiconductor devices (for example, diodes, transistors, semiconductor-based transducers); photosensitive semiconductor devices, including photovoltaic cells whether or not assembled in modules or made up into panels; light-emitting diodes (LED), whether or not assembled with other light-emitting diodes (LED); mounted piezo electric crystals:8542 Electronic integrated circuits8543 Electrical machines and apparatus, having individual functions, not specified or included elsewhere in this Chapter8544 Insulated (including enamelled or anodised) wire, cable (including co-axial cable) and other insulated electric conductors, whether or not fitted with connectors; optical fibre cables, made up of individually sheathed fibres, whether or not assembled with electric conductors or fitted with connectors8545 Carbon electrodes, carbon brushes, lamp carbons, battery carbons and other articles of graphite or other carbon, with or without metal, of a kind used for electrical purposes8546 Electrical insulators of any material8547 Insulating fittings for electrical machines, appliances or equipment, being fittings wholly of insulating material apart from any minor components of metal (for example, threaded sockets) incorporated during moulding solely for purposes of assembly, other than insulators of 8546; electrical conduit tubing and joints therefor, of base metal lined with insulating material 8548 Electrical parts of machinery or apparatus, not specified or included elsewhere in this chapter 8549 electrical and electronic waste and scrap

V.34 Operative 1/7/26

No. of pairs

Unless otherwise indicated NZ, PG, FI, DC, LDC and SG rates are Free.

The SG rate cannot be used to claim preferential tariff treatment for goods that are the produce or manufacture of Singapore unless the goods were imported before 1 December 2020.

Unless otherwise indicated general rate applies for CA.

Unless indicated in the relevant Schedule, rates for originating goods under a free trade agreement are Free.

DCS denotes the rate for countries and places listed in Part 4 of Schedule 1 to the Customs Tariff Regulations 2004.

DCT denotes the rate for HK, KR, SG and TW.

If no DCT rate shown, DCS rate applies. If no DCT or DCS rate shown, general rate applies.

From 25 April 2022 the amount of duty applied to additional duty goods, in accordance with section 18A of the Customs Tariff Act 1995, is equal to the general rate of duty plus an amount equal to 35% of the value of the goods.

From 4 July 2022, goods of Ukraine, in accordance with proposed section 18B of the Customs Tariff Act 1995, are Free.
