Goods and Services Tax

Goods and Services Tax

Understand how Goods and Services Tax is calculated on imported goods in Singapore, including examples for dutiable and non-dutiable goods.

Last updated on 24 February 2026

All goods imported into Singapore are subject to Goods and Services Tax (GST) at the prevailing rate. It is calculated based on:

The customs value of the goods, plus all duties, or

The last selling price (LSP), plus all duties, if the goods were sold more than once before import and the last buyer is the party declaring the payment permit.

Examples of How GST Is Calculated

Non-dutiable goods

GST payable = prevailing GST rate × (customs value or LSP)

Example: Vitamins

Company A buys 100 boxes of vitamins for S$900 (FOB incoterms)

Overseas freight, handling and insurance: S$100

Company A sells the vitamins to Company B before they arrive in Singapore for S$1,500

Because Company B is the final buyer before importation: GST payable = prevailing GST rate × S$1,500

Dutiable goods

GST payable = prevailing GST rate × (customs value or LSP + duties payable)

Example: Motor car

Company B purchased the vehicle at: S$100,000 (FOB incoterms)

Overseas freight, handling and insurance: S$1,000

Customs value: S$101,000

Excise duty rate for motor cars: 20% of customs value

Duties payable = S$101,000 × 20% = S$20,200

GST payable = prevailing GST rate × (S$101,000 + S$20,200)
